Hi everyone,

Here is some information and the notes from the discussion yesterday.

GitHub

Here is the github. Please let me know if you don't have access.

<https://github.com/MajorTreble/WhateverJobYouChoose-Soen6011summer2023>

Sprint 1 Report

Here is a google doc for the Sprint 1 report.

<https://docs.google.com/document/d/1gTpOZGAewLjpPHH0dK1F3Uy2SF7RkSpy-zfCfHrnm-o/edit?usp=sharing>

User Story

Here is a simple template for a user story.

As a <role>, I can <goal/desire>, so that <why>.

As an employer, I can add job offers, so that I can recruit students.

The assignment outlines some sample actors and goals. We could each pick two of them to do. Once you have your stories, you can also break down the tasks.

1. Employer – create an account/register, login, browse candidates, add job offers, select candidates that have already applied to an offer for an interview, track the post
2. Student/Candidate – create an account/register, login, and build/upload a resume; browse and apply for job offers; track applications
3. Admin – Managing all user profiles, postings and tracking

Notes

Here are some notes I took from our discussion yesterday.

- Use the Model/View/Controller architecture
- Use Scala/Java with MySQL
- Use Javadoc and JUnit
- Code Reviews before committing
- Create tasks on GitHub

Meeting

We have a meeting on Friday at 8pm on zoom.

Please share any questions, concerns, or suggestions.

Chae
